1. PURPOSE/SCOPE

The purpose of this manual is to describe the State Verification and Exchange System (SVES) and the State On-Line Query (SOLQ).

This manual provides the *technical* guidelines to be used by States for verifying social security numbers and obtaining Title II and/or Title XVI information (a.k.a. Wire Third Party Query data) used to establish eligibility as required by various Federal policies in the administration of federally-funded state-administered income and/or health maintenance programs.

The manual also provides the guidelines to be used by the States for requesting data from other SSA data exchange applications including Beneficiary and Earnings and Data Exchange (BENDEX)/ Beneficiary Earnings Exchange Record (BEER) records, State Data Exchange System(SDX) records, Prisoner data records, and 40 Qualifying Quarter data records. In addition, the manual provides information about how States can obtain citizenship data to administer Health Care programs.

The intent of this manual is to:

- Describe and provide a technical overview of the SVES and SOLQ systems.
- Describe the SSN verification process.
- Describe the input and output to/from SVES and SOLQ including detailed record layouts, field definitions, and code values.
- Describe the various options for requesting Verification/Title II/Title XVI data from SVES/SOLQ.
- Describe how to interpret the various verification return codes on the output responses from SVES/SOLQ.
- Define the source of the fields returned by SVES/SOLQ (intended for SSA internal staff only).
- Describe the limitations of SVES/SOLQ.
- Describe the various options for requesting data via SVES from other SSA data exchange applications (e.g., BENDEX/BEER, SDX, etc.).

This manual is not intended to:

- Define all processes, calculations, and/or logic used in determining the values of fields returned by SVES/SOLQ. SVES/SOLQ merely gathers data from the target databases (NUMIDENT, MBR, and SSR) based on the request type and returns the data, as is, that resides on those databases. Generally, there is no logic within SVES/SOLQ applied in determining the values returned except in isolated cases, for example, where multiple values may be converted to a simple ‘Y’(es) or ‘N’(o). Questions from States pertaining to the formulation of field values should be directed to their respective SSA Regional Data Exchange Coordinators for assistance.
- Suggest to, or instruct, the States as to how they should use and/or process the data that they receive via SVES/SOLQ requests. Laws and procedures vary from state-to-state; two states receiving the exact same data may use (or not use) that data in very different manners.
- Describe in detail all information related to other data exchange applications to which SVES provides interface (e.g., BENDEX/BEER, SDX, etc.). These applications are not supported by the SSA branch that supports SVES/SOLQ (the Data Exchange Branch) but by other SSA components. In most cases, these applications have their own separate manuals/documentation. Additionally, there has been no attempt to “data match” the source of fields returned by SVES/SOLQ to those returned by the other data exchange applications. Again, questions from States pertaining to these applications, resolving discrepancies between field values that are returned by the other data exchange applications and SVES/SOLQ, and/or obtaining non-SVES/SOLQ documentation should be directed to their respective SSA Regional Data Exchange Coordinators for assistance.
- Act as a repository for constant, up-to-date lists of all codes returned in various fields. Every attempt was made to verify and include all codes at the time this version of the manual was created. In all cases, the various codes (and their values’ descriptions) that are in this manual were copied directly from other sources (e.g., POMS, SSA Data Dictionaries, etc.). Code values may change over time and any questions from States regarding codes and the meaning of their values should be directed to their respective SSA Regional Data Exchange Coordinators for assistance.

This manual is intended for the following audiences:

- States’ Technical Staff supporting data exchange with SSA via SVES/SOLQ.
- SSA Regional Data Exchange Coordinators.

2. SVES – GENERAL

2A.SVES OVERVIEW - GENERAL

SSA's State Verification and Exchange System provides authorized State partners with a standardized method of SSN verification, Title II & Title XVI benefit information, and uniform data response. Under current processes, SSA maintains individual data bases for both the Title II (OASDI) and Title XVI (SSI) programs, as well as separate data bases for social security number identification (NUMIDENT) and earnings information (Master Earnings File - MEF). Since these databases do not always contain the same names, dates of birth, and sex codes for specific individuals, data requested from any of these files may, and often does, conflict with data for the same individual on the other files. Additionally, matching criteria established in the various data exchanges are not uniform, causing different responses to the same query, depending on the database queried. SVES provides a *single* method of query which results in:

- Standard SSN verification procedure, and
- The ability for a State to accomplish a variety of transactions by use of a single input in most cases.

The SVES is a batch query system that utilizes SSA's File Transfer Management System (CyberFusion) to receive and transmit files. States (and in some cases, Federal agencies) transmit files containing requests to SSA. SVES filters the files and routes those requests to the proper applications for processing. The appropriate response files are then transmitted back to the State.

SVES performs two types of processing: "native" and "non-native". The "native" processing creates response files directly out of the SVES containing verification and Wire Third Party Query (Title II & 16) data. The "non-native" type of processing is indirect; SVES passes requests to other SSA data exchange applications which triggers those applications to create data in their indigenous output files.

In "native" SVES, States can make 4 different types of requests for data:

- Type 1 – SSN verification data only
- Type 2 – SSN verification and Title II data
- Type 3 – SSN verification and Title XVI data
- Type 4 – SSN verification, Title II, and Title XVI data

The basic output record layouts for the four types are as follows:

- Type 1

Verification (1-156)

- Type 2

Verification (1-156)	Title II (157-839)
----------------------	--------------------

- Type 3

Verification (1-156)	Title XVI (157-1468)
----------------------	----------------------

- Type 4

Verification (1-156)	Title II (157-839)	Title XVI (840-2151)
----------------------	--------------------	----------------------

SVES also allows the States to request data from other SSA data exchange applications. SVES verifies the request data and then passes the requests to the target applications, via interfaces, to “trigger” those applications to create data in their output files. Through SVES, a State may also accomplish any or all of the following “non-native” query/transaction events:

- Beneficiary and Earnings Data Exchange (BENDEX) and Beneficiary Earnings Exchange Record (BEER accretion/deletion)
- State Data Exchange (SDX) Transactions
- 40 Qualifying Quarters
- Prisoner Record queries
- VA EARN queries

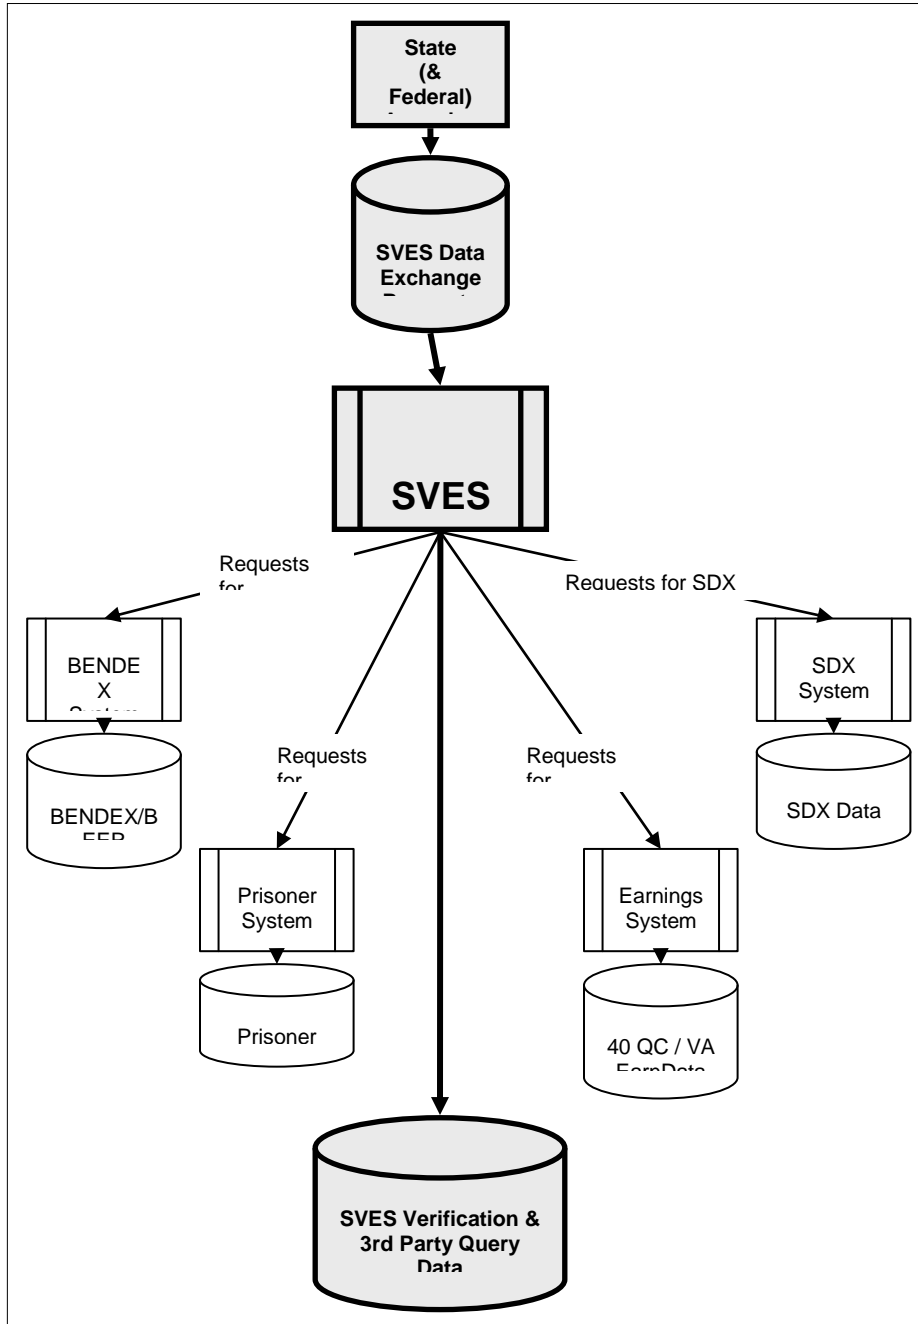

SVES also provides Citizenship related data. This information is not provided as a separate file but as a subset of the standard Type I Verification Request.

Normally, SVES runs Monday through Friday and “native” SVES request files are delivered to the States overnight. Requests through SVES to the “non-native” systems result in the following delivery schedules:

- BENDEX/BEER – Monday through Friday
- SDX – 5-6 times a week
- 40 Qualifying Quarters – Monday through Friday (overnight)
- Prisoner data – Monday through Friday (overnight)
- VA EARN data – On request

The following page contains a high-level flowchart illustrating the SVES and its interfaces.

SVES OVERVIEW FLOWCHART (Request Input, Output, and Interfaces)

2B. SVES INPUT – GENERAL

Input to SVES is daily, or at whatever interval is most advantageous to a particular State. Inputs may contain any combination of verification/exchange transactions (transactions do not need to be segregated into specific types i.e., BENDEX accretions only, verification only, etc.). There is no restriction to duplicate input records. A separate response will be provided for each request made. Also, multiple inputs are permissible when two or more desired transactions cannot be accommodated on a single input record. For example, two queries would be necessary to obtain SSN Verification/Standard Response, Title II, Title XVI and 40 Qualifying Quarters Query data. The Title XVI request would provide SSN Verification/Standard Response, Title XVI data, and 40 Qualifying Quarters Query data. The Title II request would provide SSN verification and Title II data.

Note: States should ensure that all inputs are received by the National Computer Center (NCC) at SSA by 6:45 p.m. eastern standard time. Inputs received after 6:45 p.m. will be included with the next day's inputs.

2C. SVES OUTPUT - GENERAL

Output from SVES is on at least a one-for-one basis. For each input received by SSA, the State will receive the following:

- Verification data on every input within 24 hours
- Title II, Title XVI, and 40 Qualifying Quarters and Prisoner Query Response data within 24 hours
- BENDEX/ BEER, if requested, will be received daily.
- SDX data will be received 4 to 5 times per week
- Multiple SSN data for verified SSNs, will be received when multiple SSNs are found.

The types of output generated by SVES, either directly from SVES or by requests to other data exchange systems are listed below:

1. SSN Verification/Standard Response
2. Citizenship Response
3. Title II: Standard Response with Title II Verification
4. Title XVI: Standard Response with Title XVI Verification
5. Title II and Title XVI: Standard Response with Title II and Title XVI Verification
6. 40 Qualifying Quarters Query Response (with Title XVI Verification)
7. BENDEX Record
8. BEER Record
9. SDX Record (query will show IAR or WIN changes based on SVES input)

- 10. SDX Exception Record
- 11. Prisoner Record Response
- 12. VA EARN Response

The following chart summarizes SVES transactions:

3. HISTORY

3A. HISTORY OVERVIEW

States are required by various Federal policies to follow certain guidelines and procedures in the administration of federally-funded state-administered income and/or health maintenance programs.

These policies include the requirement to verify the Social Security Number (SSN) of all recipients of federally-funded aid. Additionally, states are required to obtain and use the data provided by various Social Security Administration (SSA) applications (e.g., BENDEX, SDX, etc.) to establish eligibility in those programs. The SVES was developed to provide an electronic, computer-to-computer method by which states request, and SSA returns that data.

SOLQ, developed after SVES, is a real-time, online version of SVES. SVES is a batch system that accepts transmitted request files containing multiple requests and transmits a file containing the multiple responses back to the requestor overnight. SOLQ, on the other hand, accepts terminal input transmitted from a requestor's site for one request, processes that request, and immediately sends the response back to the requestor.

3B. SVES vs. EVS

Prior to the development of the SVES, SSA provided electronic SSN verification via the Enumeration Verification System (EVS) using the NUMIDENT database. The EVS still exists and is currently used by SSA and some states. The SVES actually utilizes EVS functions for verification but provides much more than the EVS.

Verification by SVES provides a standardized, complete verification of each SSN utilizing *all* databases (e.g., MBR, SSR); not just the NUMIDENT. By using all of SSA's core databases, SVES returns approximately 12 percent more verified SSNs than the EVS. Output from the SVES verification is daily and in the SVES output format SSN Verification/Standard response.

SSN verification by SVES differs from EVS verification procedures by:

- Utilizing the NUMIDENT, MBR (Title II), and SSR (Title XVI) databases to determine identity. Permitting verification against any of the three to mean positive verification.
- Allowing for surname differences between State input data and SSA data when first name, middle initial and date of birth match (this primarily affects records for individuals where unmarried names differ).
- Searching for a "better" number when the State input data does not agree with SSA records.

SVES/SOLQ VERIFICATION ROUTINE FLOWCHART

4. SVES/SOLQ VERIFICATION PROCESS

Information available upon request.

5. SVES LIMITATIONS

Listed below are the limitations that exist within the SVES system.

1. SVES does not generate a Title XVI WTPY response if a Claim Account Number (e.g., B, C, or D BIC), rather than the individual's Social Security Number, is used in the input record. SVES only provides SSN verification and a Title II response. It is necessary to use the individual's SSN in the input record to generate a Title XVI WTPY response.
2. SVES will generate a Title II response for the A BIC when the individual's SSN is used in the input record. If the individual has previously been denied on that SSN (LAF N), and applies as an auxiliary on another account, SVES will generate a response on the denied SSN. In some cases, an XREF Entitlement Number and BIC will appear on the Title II WTPY response, which enables the State to resubmit an SVES input using the CAN. However, if no XREF Entitlement Number and BIC appear, it is necessary to determine the appropriate CAN (if any) and resubmit an SVES input. If needed, the State should contact SSA for assistance with this determination.
3. SVES occasionally provides a Title II response for someone other than the individual whose name and SSN were submitted on the SVES input. For example, an SVES input for an individual may provide a Title II response for the individual's spouse or child. This happens when SSA's Master Beneficiary Record displays the spouse's or child's record before the individual's record. Such cases require the State to contact SSA for assistance.
4. SVES responses sometimes indicate that there is no Title II or Title XVI record even though one exists. This may occur because SVES processes WTPY requests overnight when SSA also performs maintenance on its databases. During this maintenance some records are not accessible. It is usually possible to request the record one or more days later and obtain accurate data. States should contact SSA for assistance if this problem recurs for the same case for which there is Title II and/or Title XVI eligibility.
5. Some Title II responses for aged beneficiaries (age 60 and over for widows/widowers, and age 62 and over for others) contain a Disability Onset Date. SVES does not indicate whether the disability application was approved or denied, so the State cannot determine whether benefits for individuals under age 65 are being paid on the basis of age or disability. If the State needs to determine the basis of payment, it is necessary to contact SSA for assistance.

6. REVISIONS TO THE MANUAL

For full Revision History, see [Appendix I](#).

Revisions to the September 2015 Manual to create the July 2017 Manual

1. Updated references to the retired FIPS on pages 58 and 111 for Country Codes. Created a reference to the GENC, which replaced it.
2. Added a note on pages 21 and 22 that SCHIP transactions do not return Title II and Title XVI responses.
3. Corrected SVES input record by adding VAN in position 112.
4. On page 9, corrected the 5pm cutoff time for SVES to 6:45pm.
5. On page 37, 38, 96, and 97, clarified the meaning the HI or SMI 3rd Party Indicators – they mean only that data is present, not necessarily that there is current 3rd party coverage.
6. Corrected Health Insurance (HI – Medicare Part A) to be *Hospital* Insurance on pages 30, 36, 84, 95, 165, 213, and 225.
7. Corrected Health Insurance Benefits (HIB) to be *Hospital* Insurance Benefits as it is used in this document specifically to refer to that part of Medicare on pages 165 and 179.
8. Updated Type of Recipient definitions for the ‘XF’, ‘XM’, and ‘XP’ codes and removed the ‘EP’ code since it is not a valid value in the Title XVI Response on pages 52 and 105.

7. INPUT: SVES INPUT RECORD LAYOUT

The following table illustrates the SVES input record layout. Mandatory fields are identified with an asterisk. However, only one number, SSN or CAN should be input (generally, SSN is preferable). If the CAN is input, the BIC is mandatory. *Category of Assistance is a mandatory field for BENDEX/BEER requests, Food Stamp Death requests, SCHIP requests, and PCIP requests.*

7A. CODING SPECIFICATIONS FOR THE SVES INPUT RECORD

Positions 1-62 and 65-67 are self-explanatory. Positions 112-137 are for future expansion. Listed below is an explanation of codes in positions 63, 64 and 68-111 used for the SVES requests.

Position 63 (Title II Request):

*Blank: No Title II exchange requested
Y: Title II WTPY request
B: BENDEX transaction
E: BENDEX/BEER transaction
A: Title II WTPY request/BENDEX transaction
R: Title II WTPY request/BENDEX/BEER transaction
P: Prisoner Record Query

NOTE: *The following VA EARN codes are restricted and are not available to States. They are only available for use by VA, OPM, RRB, and HUD.*

C: VA EARN
D: VA EARN and WTPY

Position 64 (Title XVI Request):

Blank: No Title XVI exchange requested
Y: Title XVI WTPY request
B: IAR transaction
1: WIN transaction (accrete)
2: WIN transaction (change)
3: WIN transaction (delete)
4: WIN transaction (SDX query)
F: Title XVI WTPY request/WIN (accrete)
G: Title XVI WTPY request/WIN (change)
H: Title XVI WTPY request/WIN (delete)
I: Title XVI WTPY request/WIN (query)
J: Title XVI WTPY request/IAR/WIN (accrete)
K: Title XVI WTPY request/IAR/WIN (change)
L: Title XVI WTPY request/IAR/WIN (delete)
M: Title XVI WTPY request/IAR/WIN (query)
*Q: 40 Qualifying Quarters Request
D: Title XVI WTPY request/IAR
T: IAR/WIN (accrete)
U: IAR/WIN (change)
V: IAR/WIN (delete)
W: IAR/WIN (query)
P: Prisoner Record Query

*Mandatory for 40 QQ requests.

NOTE: A blank in both positions 63 and 64 will generate a verification response only.

NOTE: *Positions 63 and 64 must both be Blank for State Children's Health Insurance Program (SCHIP) and Pre-Existing Condition Insurance Plan (PCIP) requests or the response will be returned in error with an Error Condition Code of 500.*

Position 68 (Category of Assistance):

A	Aid to Aged
B	Aid to the Blind
*C	Aid to Families with Dependent Children (AFDC)
D	Aid to the Disabled
*F	Food Stamps (FS)
H	Health Maintenance, Buy-In or Attempted Buy-In
I	Income Maintenance
*J	AFDC and FS
*K	FS and Medicaid
*N	Title XIX, Medicaid Determination
*P	Child Support Enforcement
S	Written Statement of Consent of Individual
*U	Unemployment Compensation
W	PCIP Request
Z	SCHIP Request

*BEER Exchange is permitted for these categories of assistance only.

Positions 69-71 (State Communication Code):

BDA	Used to initiate BENDEX, re-accrete, or change Category of Assistance or State Control Data
DPA	Deletes BENDEX exchange - no longer eligible for public assistance, or State has received allegation of death
DTH	Deletes BENDEX exchange - evidence of death

Position 72-111 (State Data):

The format for positions 72-111 is illustrated below:

NOTE: Positions 72-111 may be used for any data the State wishes unless the intent is BENDEX accretion/deletion or SDX-IAR. However, only information coded in the first 22 positions (72-93) will be included as the "Input Welfare ID No." in the response. The following is an explanation of how BENDEX and SDX-IAR should be coded.

Position 72-95 (Exchange Request Data):

BENDEX Accretion/Deletion

Welfare ID Number (State Control Data)	AN	72-83
IEVS Agency Subcode	AN	84-87
Date of Death	N	88-95

Positions 96-111:

SDX-IAR

County Code	N	96-98
Date of Signed IAR Authorization	N	99-106
State/County of Reimbursement	N	107-111

The use of positions 72-111 depends on the transactions illustrated in the table below.

IF:	THEN:
Position 63 contains a BENDEX transaction (B, E, A, or R);	The format is: Welfare ID number (State Control Data) 72-83 IVEs Agency Subcode 84-87 Date of Death 88-95
Position 64 contains an SDX-IAR transaction (B, E, J, K, L, M, D, T, U, V, W, or Z);	The format is: County Code 96-98 HR Date (Date of Welfare Application) 99-106 State/County of Reimbursement 107-111
Position 64 contains an SDX-WIN transaction (1, 2, 3, 4, F, G, H, I, J, K, L, M, T, U, V, or W);	The format is: Welfare ID number (State Control Data) 72-83

Any positions that are not specified above may be used by the State for any data the State wishes. The information in positions 72-93 will be included as the “Input Welfare

ID No.” in the response. Miscellaneous information included by the State in positions 94-111 is not reflected on the SVES output.

Note: In this table, Title XVI fields (starting at position 840) are shaded to distinguish them from Title II fields.

LENGTH	DATA ELEMENT	TYPE	POSITION	DEFINITION
12	Title II Claim Account Number (CAN) and BIC	AN	157-168	<p>Claim Account Number (positions 157-165) and Beneficiary Identification Code (positions 166-168).</p> <p>The Claim Account Number (CAN) and Beneficiary Identification Code (BIC) under which a Title II claim exists. The CAN portion of the 'claim number' is the SSN of the wage earner on whose record benefits are being paid.</p> <p>The complete list of BIC Code values are listed in APPENDIX D - BIC CODE VALUES</p>
5	State and County Code	AN	169-173	The first two positions represent the State code; the remaining positions are the county codes (from the Geographic Code Book) that are responsible for any mandatory or optional supplementation payment. This field represents the State and county residence for recipients unless another State and county have jurisdiction.
5	ZIP Code	N	174-178	The zip code of the residence address.
4	ZIP + 4	N	179-182	The additional 4 positions of the zip code where the 9-digit zip code is used.
1	Number of Lines of Address	N	183	The number of 22 position lines of address present. Up to 6 lines maximum.

2	Minimum Number QQs (1937-1950)	N	76-77	This field represents the minimum number of qualifying quarters earned under the verified SSN during the period of 1937-1950. SSA determines this number by taking the total covered earnings during this period, and dividing it by 400. The claimant earned "at least" this many QQs before 1951.If SSA is able to provide QQ information for 1937 through 1950 in positions 85-440 (Qualifying Quarters Pattern); then there will be no information shown in positions 76-77 (Minimum Number QQs) or 78-79 (Maximum Number).
2	Maximum Number QQs (1937-1950)	N	78-79	This field represents the maximum "possible" number of qualifying quarters earned under the verified SSN during the period of 1937-1950. SSA determines this number by taking the total covered earnings during this period and dividing by 50. Generally, the actual QQs earned during this period will be less than the "maximum possible". If SSA is able to provide QQ information for 1937 through 1950

Each quarter is represented by a code. For the years 1937-1950, SSA's Master Earnings File (MEF) frequently contains only the total earnings and not a yearly breakdown of QQ information. If the MEF does not contain the yearly breakdown of QQ information for years prior to 1951, then the information will be shown in positions 76-77 (Minimum Number QQs) and 78-79 (Maximum Number) if it exists. <u>Covered</u> Qualifying Quarters Values: A Agricultural QQ C Wage QQ D Military QQ G Gift QQ

LENGTH	DATA ELEMENT	TYPE	POSITION	DEFINITION
9	Input SSN	N	1-9	This is the SSN information provided on the SVES query by requestor.
13	Input Surname	AN	10-22	This is the surname information provided on the SVES query by requestor.
10	Input First Name	AN	23-32	This is the first name information provided on the SVES query by requestor.
7	Input Middle Name or Initial	AN	33-39	This is the middle name/initial information provided on the SVES query by requestor.
8	Input Date of Birth	AN	40-47	The date of birth information provided on the SVES query by requestor. (Note: User may input spaces in this field if DOB is unknown) Format: MMDDCCYY
1	Input Sex Code	AN	48	The sex code information provided on the SVES query by requestor. M Male F Female
4	Input Report Year	N	49-52	The report year information provided on the SVES query by requestor. Format: CCYY
45	Input User Control Data	AN	53-97	The control data information provided on the SVES query by requestor. (Note: This information is “free-form” and the user can place any identifying information in this field on the input request that they want returned for identification purposes.)

LENGTH	DATA ELEMENT	TYPE	POSITION	DEFINITION
1	Verification Code	AN	98	Indicates SSN verification or the reason for non-verification. Blank Input SSN verified using the SSN, name, and DOB information provided. 1 SSN not on file 2 Name matches, sex code does not. 3 Name matches, sex code matches, but DOB does not match 4 Name matches, sex code and DOB do not match * Input SSN not verified. SSA located and verified on name, DOB, and sex code and verified a different SSN (see Verified SSN field below)
3	Input Processing Code	AN	99-101	The processing code provided on the SVES query by requestor. Value is always '214'.
4	Input Requestor ID Code	AN	102-105	This is the unique requestor code information provided on the SVES query by requestor. The code is supplied to requestor by SSA. (e.g., 1VAH)
3	Input Multiple Request ID	AN	106-108	This is the multiple request id information provided on the SVES query by requestor.
9	Verified SSN	N	109-117	This is the SSN returned by SSA. In case where the Input SSN is not verified, SSA located and verified on name, DOB, and sex code and verified a different SSN that is contained in this field.
7	Not currently used	AN	118-130	Blanks.
7	Annual Total	AN	131-137	This is the annual earnings for the verified SSN. Format: \$\$\$\$\$\$

9. STATE ON-LINE QUERY (SOLO)

9A. SOLO - GENERAL

State Online Query (SOLO) is an online version of the SSN Verification, Title II, and Title XVI query portions of SVES (i.e., the “native” SVES). This system is functionally the same as the SVES system except for restriction to SSN Verification, Title II, and Title XVI queries only. SOLO is an enhancement which provides States the capability to get data in real time, on the computer at a worker’s desk, in a matter of seconds. Availability of the SOLO is normally Monday through Friday, 6AM to midnight (Eastern Time) and 6AM to 6PM (Eastern Time) on Saturdays and Sundays.

Prior to embarking upon a SOLO implementation project, the latest version of the *SOLO Planning Guide* should be acquired from the SSA Regional Data Exchange Coordinator.

The system will provide SSN Verification/Standard Response, Title II and Title XVI benefit information to the States to determine clients’ eligibility to certain State-administered programs. SOLO *cannot* be used to receive the BENDEX/BEER, SDX, 40 Qualifying Quarter query, Prisoner query, or VA EARN responses.

Requests for data via SOLO differ from SVES, in that, SVES provides the States the option to request 4 types of responses (1 - SSN Verification, 2 - SSN Verification & Title II, 3 - Verification and Title XVI, 4- Verification, Title II, & Title XVI) whereas SOLO offers no such distinction. SOLO requests will request *all* data (4- Verification, Title II, & Title XVI) from SSA and SOLO returns the type of response *based upon the data that is available*. Therefore, an SOLO request could result in any of the 4 SVES response types being returned (based upon the available data); the State must determine which type was returned and process it accordingly.

Generally, the responses received from an SOLO query are identical to the responses received from an SVES query. The exception is in the Title XVI response: *in SOLO the Title XVI response does not provide any data in the 100-byte, 40 QQ History field* residing at the end of the Title XVI response. Otherwise, the format and the data in SVES and SOLO responses are identical except as noted in this manual (e.g., SOLO does not provide a ‘&’ Verification Code).

9B. SOLO INPUT/OUTPUT - GENERAL

SOLO requests will be prepared by the State and will be transmitted electronically between a central State site and SSA’s NCC. Various methods of collecting and transmitting the SOLO requests will be used, such as:

- remote job entry terminals

- personal computers acting as remote job entry terminals, and
- host computer-to-host computer.

All responses will be returned to the central State site. Output will be electronic transmissions to each central State site. The basic response will consist of a record containing:

- the requested data,
- error condition (if applicable),
- verification code,
- record type,
- Title II status,
- Title XVI status,
- Title II Data (if available), and
- Title XVI Data (if available)

Any method selected must be compatible with SSA's Data Communications Utility (DCU) Batch Data Transmission System.

Generally, SOLQ exchanges are done between the States and SSA in a mainframe, CICS-to-CICS environment. There are a few exceptions, but those exceptions still emulate the CICS environment. For the purposes of this manual, the CICS environment is assumed.

In CICS, when a State links to the SSA SOLQ program (QV00C00), a pre-defined data stream (called a Commarea; short for CICS Communications Area) is used to pass the request and response to-and-from the State and SSA. SOLQ uses a 2570-byte Commarea. The SOLQ Commarea consists of three (3) distinct sub-areas: 1) An Input/Request area, 2) the Output/Response area, and 3) a Free-form area. These three areas are defined as follows:

DATA ELEMENT	LENGTH	POSITION	DEFINITION
SOLQ Commarea Input/Request Area	70	1-75*	This area is populated by the State and contains the information to make a request. More information about the format of this area is provided below.
SOLQ Commarea Output/Response Area	2200	71-2270*	This area is populated by SSA and will contain either: a) an SVES-type of response or, b) an error code and an error message. Note that this area is much longer than any of the SVES responses; there is extra unused space

DATA ELEMENT	LENGTH	POSITION	DEFINITION
			included at the end for future expansions. More information about this area is provided below.
SOLQ Commarea State Free-form Area	300	2271-2570	This area is a free-form area provided for the States' use only. SSA does not use this area for any purpose. It is provided to the States only to record any information desired (e.g. auditing/tracking data) by the State. Any information passed in this area to SSA is returned, as-is, back to the States.

* Positions 71-75, which contain values for the Agency Identifier field on the request, are overlaid in the response.

9C. SOLQ INPUT/REQUEST AREA in COMMAREA

The first 70 bytes of the SOLQ Commarea are populated by the State and is used to specify the information requested from SSA. Mandatory fields are identified with an asterisk. However, only one number, SSN or CAN may be provided (generally, SSN is preferable). If the CAN is input, the BIC is mandatory. The layout of that 70-byte area is as follows:

LENGTH	DATA ELEMENT	TYPE	POSITION	DEFINITION
4	Transaction ID*	AN	1-4	'QV00'
1	Application Code*	AN	5	'A'
3	State Agency Code*	AN	6-8	Comprised of a two-digit numeric State Code (See APPENDIX K – SVES/SOLQ STATE CODES) preceded by: 0 – SOLQ request W - PCIP Request Z - SCHIP Request

LENGTH	DATA ELEMENT	TYPE	POSITION	DEFINITION
20	Personal Identification Number (PIN)	AN	9-28	Can be any value that the State wants to provide to identify the requestor of the information. This is primarily used to facilitate SSA audits of States' SOLQ usage.
9	Input SSN*	N	29-37	The Social Security Number input by the State.
12	Input Claim Account Number (CAN) (38-46)/BIC (47-49) *	AN	38-49	The CAN/BIC (Claim Account Number & Beneficiary Identification Code) input by the State.
5	Input Given Name*	AN	50-54	The first name input by the State.
1	Input Middle Initial	AN	55	The middle initial input by the State.
7	Input Surname*	AN	56-62	The last name input by the State.
8	Input Date of Birth*	N	63-70	The date of birth input by the State. Format: MMDDCCYY
5	Agency Identifier	AN	71-75	Unique code assigned to requesting Agency.

9D. SOLQ OUTPUT/RESPONSE AREA in COMMAREA

The 2200 bytes of data in positions 71-2270 in the SOLQ Commarea are used by SSA to return the response to the State's request. This area will contain either a) a valid response to the request or, b) an error code and message.

If the Output/Response area contains a valid response, it will contain either a SVES Type 1, 2, 3, or 4 response. A valid response can be determined by numeric data being returned in the first byte of the response area (position 71) as valid responses contain an SSN in the first 9 bytes (71-79) of the response area. The format of these responses are *exactly* the same format as the SVES responses (refer to the [OUTPUT: RESPONSES TO THE STATES – RECORD LAYOUTS](#) section presented earlier in this manual) except for the following two exceptions:

- The field positions are offset by 70 bytes because of the Input/Request area that precedes the Output/Response area in the SOLQ Commarea.
- The Title XVI data provided in response Types 3 and 4 in SOLQ does not provide any data in the 100-byte, 40 QQ History field residing at the end of the Title XVI response.

The recipient of the data must determine which SVES Type (1, 2, 3, or 4) format was returned. This is determined by checking the Record Type field returned in the response area in position 224 of the Commarea (this is the Record Type field normally in position 154 of the SVES SSN Verification/Standard Response offset by the first 70 byte Input/Request area of the SOLQ Commarea).

If the Output/Response area does not contain a valid response, it will contain an error code and an error message. An error can be determined by non-numeric data being returned in the first byte of the response area (position 71). When an error response is returned, a 4-character Error Code will reside in positions 71-74 with an accompanying 80-character Error Message in positions 75-154. A list of SOLQ Error Codes is presented below.

9E. SOLQ ERROR CODES & MESSAGES

The following table is a list of the error return codes that can be returned by SOLQ and the error message that is associated with the returned error code. *Note that some of the messages are not really meaningful to States but, when encountered, are meaningful to SSA technical personnel for problem identification and resolution.*

SOLQ ERROR CODE	MESSAGE
D463	SYSID INVALID SQL Code not found (+100)
D464	PKG TIMESTAMP SQL Code PKG-TIMESTAMP (-805)
D465	PLAN TIMESTAMP SQL Code BIND-TIMESTAMP (-818)
D469	VAN TABLE NOT AVAILABLE SQL Code Unavailable Resource (-904)
E101	SSN INVALID (input SSN is spaces)
E102	SSN INVALID (input SSN is not spaces)
E110	EVS FAIL (input SSN is spaces)
E120	EVS FAIL (input SSN is not spaces)
E400	INVALID COMMAREA LENGTH
E420	INVALID APPLID REQUEST (not equal 'A')
E440	NO VALID SSN OR CAN RECEIVED (spaces and/or non-numeric)
E460	ACCESS DENIED (UIQ only)
E461	ACCESS DENIED
E462	VAN NOT ACTIVE
E600	SSN NOT VERIFIED, OTHER REASON
E710	CRI FAIL
E888	INVALID DATE OF BIRTH (INCORRECTLY FORMATTED OR SPECIAL CHARACTERS SUCH AS FORWARD SLASH (/) INCLUDED)
S400	ERROR GETTING MEMORY (on GETMAIN)
S401	FAILED-TERMERR (Terminal Error)
S402	FAILED-LENGERR (Length Error – exceeds maximum)
S403	FAILED-NOTALLOC (Facility specified not owned by application)
S404	FAILED-NOALLOC (All other non-zero return codes)
S425	BAD LINK TO SOLQ APPL (Bad link to QV02C00)
S430	BAD LINK TO GU02

SOLQ ERROR CODE	MESSAGE
S435	BAD RETURN FROM GU02
S502	PROBLEM BRKDWN-SPREAD
S503	PROBLEM SSR-SPREAD
S505	Various CICS LINK, GETMAIN, and other processing errors will cause this generic error to be returned to the State. SSA technical personnel will determine the exact cause.
Blank	Input data is valid

9F. SOLQ ARCHITECTURE AND CONNECTIVITY REQUIREMENTS

9F.1 STATE ARCHITECTURE REQUIREMENTS

- LU6.2 compatible
- Audit Trail Capabilities in Design
- Secure Bind
- Systems generated requests
- Requests are Case Sensitive (UPPER CASE)
- C2 compliant External Security Manager(ESM)

9F.2 SSA ARCHITECTURE REQUIREMENTS

- LU6.2 compatible
- Audit Trail Capabilities in Design
- Secure Bind with State
- SSA Mainframe database is case sensitive (ALL CAPS)
- C2 compliant ESM Security
- COBOL Commarea (mainframe)
 - Provides access to Madam, (MBR, Numident, SSR data)
 - Control Audit and Testing Facility (CATF) - provides Traffic File and Audit Traffic Report for certification visit.

9F.3 KEYS TO SOLQ CONNECTIVITY

- In most states, this is a 56Kb link. If necessary to order a new link, installation occurs approximately 45 workdays after being ordered. This link requires an SNA generation to be performed on both the SSA and State sides. If used, a Front End Processor (FEP) must have a Line Interface Coupler 3 (LIC3) and the necessary scanner weight for the 56Kb link (or whatever speed is ordered). Though still used in a few cases, FEP technology and

hardware is being phased out and replaced by an Enterprise Extender interface (router-based; provides a means for the efficient transport of SNA data across an IP network).

- The data passing to and from the state over the installed link must use the SNA LU 6.2 protocol to communicate with SSA's CICS application for SOLQ.
- The Data Communications Interface (e.g., CICS, IMS, IDMS, etc.) must be SNA LU 6.2-compliant. It must have a presentation layer (for the state "terminals"). This presentation layer interface must be developed by the State (SSA can provide "sample" CICS code). It must be capable of BIND-level security.
- If this interface is CICS, SSA can provide a communications module. This program only runs under CICS and uses standard Application Programming Interface (API) calls. The program communicates with the state terminals using the SNA LU 6.2 protocol.
- The security package must be C2-compliant and capable of BIND-level security.
- The data produced by the SSA-provided CICS communications module running at the state is unformatted EBCDIC; no binary or packed fields. Most of the data is unreadable without the record layout.
- The lines running between the application in the state and the ending "terminals" must be secured and encrypted lines that adhere to Federal Standards.
- The state will be responsible for the presentation-layer. SSA does not provide the state with any presentation service (i.e., screen formats). The state can opt to run an intermediate layer between the communications module and the end "terminals" which would convert the data to some other protocol.

9G. SOLQ IMPLEMENTATION LIFECYCLE OVERVIEW

The following is an overview of the tasks and procedure that are performed to install SOLQ at a State. This overview will provide the State with an indication as to the scope of an SOLQ installation and implementation on both the State and SSA sides. *This overview is intended as only a guideline to the States to estimate scope. The steps and tasks listed are not static and are subject to change for each installation.* For more detailed information (e.g., copies of various forms, etc.), please contact your SSA Regional Data Exchange Coordinator.

9G.1 STATE RESPONSIBILITIES AND TASKS

PLANNING STAGE –

- State and SSA Regional Coordinator hold marketing meeting
- State sends Letter requesting participation in SOLQ
- State completes SSA Technical Survey
- State completes SSA Architecture Matrix
- State receives SSA acknowledgment for access to SOLQ
- State receives State minimum architecture requirements for SOLQ
- State participates in Introductory Conference Call with SSA
- State shares Connectivity Information with SSA
- State completes Development/Validation Region SSA-1121 for Machine Pin/Password and sends to the SSA Regional Office
- State receives SSA SOLQ Package which consists of the NC CODE, Test Cases, LU Names, and modems, to the State
- State receives SOLQ-IBM checklist
- State receives copy of SVES/SOLQ manual
- State performs ping & end-to-end test with SSA
- State acquires access to the development region for 60 days using the demonstration software
- State Exchanges with SSA a Contact Lists of Team Members and their roles and responsibilities
- State notifies Regional Office within 45 days if they desire to continue with SOLQ

DEVELOPMENT STAGE WITH STATE/CO/RO

- State participates in Technical conference call with SSA Systems
- State signs the SSA Memorandum Of Understanding (MOU) Agreement and forwards to Regional Office
- State continues in the Development Region
- State writes Security Guidelines Document
- State writes Test Plan
- State sends SSA Systems an Systems Requirement Document to the Project Leader/Analyst
- State Sends SSA Systems an Architecture Diagram to the Project Leader/Analyst
- State notifies SSA Systems Project Analyst when they are ready for validation

VALIDATION STAGE WITH STATE/CO

- State contacts SSA programmer to discuss Connectivity to validation region, (State and SSA perform bind secure connection to Validation Region)
- State receives validation test scripts from SSA
- State tests in the Validation Region

- State sends signed Security Guidelines Document to SSA/OEIE (Office of Electronic Information Exchange)
- State sends Test Plan to SSA/OEIE
- State contacts SSA/OEIE when ready for Integration Testing.

INTEGRATION TESTING (STATE)

- State completes an Integration Region SSA-1121 for Machine Pin and sends to Regional Office
- State contacts SSA to discuss Connectivity to the Integration Region
- State performs ping & end-to-end test
- State has Integration Access
- State tests and submits real case requests as long as they are in the integration region
- State performs comparison test (send 1 request of Type 4 cases via both SVES and SOLQ, compare the results).

CERTIFICATION

- State notifies SSA/OEIE when they are ready for the certification visit (state should have made at least 100 or more requests)
- State/SSA schedule certification visit
- State/SSA certification visit occurs
- State completes SSA form 1121 for Production Region

PRODUCTION

- State participates in a conference call with SSA to discuss connectivity to SSA's Production Region
- State performs ping & end-to-end test with SSA
- State receives word from SSA Production Region is ready
- State has access Production Region

9G.2 SSA RESPONSIBILITIES AND TASKS

PLANNING

- Regional Office marketing visit to state agency
- Regional Office notifies SSA Systems (SOLQ Project Manager and Lead Analyst of State Agency Name)
- Project Lead Analyst sends RO SOLQ State Minimum Threshold Requirements
- Regional Office receives State request for SOLQ
- Regional Office sends State Request for SOLQ to Office of General Counsel (OGC)
- Office of OGC receives the state request for SOLQ
- Office of OGC reviews state request for SOLQ
- Office of OGC notifies State Agency they have temporary access to demonstration software for 60 days
- SSA Systems holds Introductory Conference Call with State
- SSA Systems sends State SOLQ Package which consists of the NC CODE, Test Cases, LU Names, and modems, to the State
- SSA Systems sends SOLQ-IBM check list to State and Regional Office
- SSA Systems sends state SVES manual
- SSA Systems sends state contact list of team members and their roles and responsibilities
- SSA Systems develops Microsoft Project Plan
- Regional Office sends signed DEV/VAL SSA-1121 for Machine Pin to the OEIE
- OEIE approves SSA-1121
- SSA Systems processes the SSA-1121
- SSA OTSO issues Machine Pin/Password
- SSA Systems sends State pin/password to State Project Manager
- SSA Systems holds conference call with State to discuss connectivity to development region
- SSA Systems and State perform ping & end-to-end test
- SSA Systems assists state during their evaluation of SOLQ
- Regional Office notifies Central Office of the State desire to continue
- SSA Systems schedules technical conference call

DEVELOPMENT

- SSA Systems assists State while in development Region
- Regional Office receives signed Agreement and sends to Central Office (ODISP)
- SSA ODISP approves Agreement
- SSA Systems receives State Architecture Diagram and Systems Requirements Document
- SSA Systems starts the draft of the State's Architecture Design Document (ADD)
- SSA Systems holds a conference call with state, when they are ready to move to the validation region
- SSA Systems sends State the Validation Test scripts
- SSA Systems updates MSP Plan
- SSA Systems monitors States pin/password expiration date, asks state if continuance if necessary
- SSA Systems sends requests to OEIE for continuance of pin/password
- OEIE sends approval to SEF
- SEF notifies SSA Project Lead Analyst of the extension
- SSA Systems notifies State of the new expiration date

VALIDATION

- SSA Systems notifies OEIE validation completed
- SSA/OEIE receives the States Security Guidelines Document
- SSA/OEIE receives the States Test Plan
- SSA/OEIE receives the States Integration Region 1121 for a Machine pin/password
- SSA/OEIE receives and approves SGD, Test Plan and Integration 1121
- SSA systems asks workgroup and state for comments on draft State ADD
- SSA Systems Finalizes the State ADD and sends to workgroup for signature
- SSA Systems creates State Validation Summary
- SSA OEIE holds conference call with State
- SSA OEIE approves the move to the Integration Region
- SSA Systems monitors States pin/password expiration date, requests continuance if necessary
- SSA Systems sends requests to OEIE for continuance of pin/password
- SSA OEIE sends approval to SEF
- SSA SEF notifies SSA Project Lead Analyst of the extension
- SSA Systems notifies State of the new expiration date
- SSA Systems validates formatting of test cases for state if requested
- SSA Systems receives notification from State to move to Integration
- SSA OEIE receives State 1121 for Integration Region
- SSA OEIE approves State 1121 for Integration Region

INTEGRATION

- SSA Systems processes the Integration 1121
- SSA OTSO issues Machine pin/password
- SSA Systems notifies State Project Manger of the Machine pin/password
- SSA Systems holds a Technical Connectivity Call with State to access Integration Region
- SSA Systems participates in states ping & end-to-end test
- SSA Systems notifies OTSO/DIET the state is connected and testing
- State Systems tests and submits real case requests for as long as they are in the integration region
- SSA/OEIE receives notification from State they are ready for certification site visit
- SSA/OEIE schedules site visit
- SSA Systems run Audit Trail Report (sample of 100 cases from the state's traffic file)
- SSA/OEIE makes on-site certification visit
- SSA/OEIE certifies State

PRODUCTION

- SSA Systems Contacts OTSO to set up production date
- SSA Systems Notifies State of production date (Saturday)
- SSA Systems processes the Production 1121
- SSA OTSO issues Production Region Machine pin/password
- SSA Systems advises state of the Machine pin/password
- SSA Systems holds Technical Connectivity Call with State to discuss connectivity to the Production Region
- SSA Systems participates in States ping & end-to-end test
- SSA Systems /State acquire connectivity to Production Region
- SSA OTSO Production ready
- SSA Systems notifies State Production Region ready
- SSA Systems verifies State has access to Production
- SSA Systems follows up with State to be sure all is well
- SSA Systems sends State the CICS help desk number to report issues and problems
- SSA Systems maintains MI Reports on State usage
- SSA Systems notifies OTSO to suspend State Integration Pin/Password
- SSA Systems notifies SEF to suspend State Dev/Val Pin/Password

POST IMPLEMENTATION

- Finalize all Documents

9H. RESOLVING SOLQ CONNECTIVITY AND RESPONSE TIME ISSUES

During the course of testing, validation, integration, and production, there may be times when SOLQ connectivity and/or response time issue arise. When those conditions occur, follow the following procedure to initiate resolution.

1. First determine if any changes were made on the state's side that would affect connectivity or response time.
2. Call your Regional Data Exchange Coordinator to inquire whether or not he/she is aware of any known problems.
3. Call the SSA CICS Monitoring Room at 410-966-1314.
4. Provide the technician at the SSA CICS Monitoring Room with the following information:
 - a. The CICS region:
Development: CEDSEAC
Validation: CEVSOA2
Integration: CIISOA1
Production:
SSA "load levels" SOLQ connections across 3 production CICS regions to optimize performance. A State's connection could be to region CIPSOA1, CIPSOA2, or CIPSOA3 and could change over time due to this optimization. When calling the CICS Monitoring Room, inform them that you are connected to either CIPSOA1, CIPSOA2, or CIPSOA3 and allow them to make the determination as to the actual connection at that time.
 - b. The connection name. All SOLQ connection names start with the letters 'SO' and are 4 characters long. The last two characters are the alphabetic state code (e.g., Maryland = SOMD)
 - c. A contact name and phone number to get back to you.
5. The SSA CICS Monitoring Room will then, at a minimum, perform some or all of the following to resolve the issue:
 - a. Determine if only one state is having a problem.
 - b. Attempt to re-connect and re-acquire the connection.
 - c. Pass the issue on to the Network Support (e.g. CICS, VTAM) team if needed.

- d. Check with Top Secret for “session key” problems.
- e. Check to see if Cyber Fusion (NDM) might be transmitting large batch files to the state which may interfere with response time.
- f. Call the National Network Center to place a trace on the line.
- g. As a last resort, initiate an Initial Program Load (IPL) for the state’s and SSA’s CICS regions.

10. APPENDICES

APPENDIX A – GLOSSARY & ACRONYMS

Below is a list of acronyms and/or terms and their definitions.

AFDC	Aid to Families with Dependent Children
AIME	Average Indexed Monthly Earnings
AMW	Average Monthly Wage
Applicant	A person who has filed for assistance or benefits.
ARMSMULT	Automatic Reappraisal Military Service and Multiple Account Numbers
BEER	Beneficiary Earnings Exchange Record
BENDATA	State Beneficiary Data (BENDEX) File
BENDEX	Beneficiary and Earnings Data Exchange
Beneficiary	A person who is entitled to Social Security benefits.
BOAN	Beneficiary's Own Account Number
CAN	Claim Account Number
CAPS	Claims Automated Processing System (Note: the CAPS system has been replaced by the Modernized Claim System)
CDB	Childhood Disability Benefits
Claimant	A person on whose behalf an application is made.
Claim Number	A number used by SSA to identify an individual who is a claimant or a beneficiary
Client	A synonym for beneficiary or recipient.
CO	The Social Security Administration's Central Office (located in Woodlawn, Baltimore, Maryland)
DIB	Disability Insurance Benefits
DO	A Social Security District Office (same as FO)
EIN	Employer Identification Number
Eligible	For Title II, to meet all the requirements for receiving Social Security benefits, except for filing an application. For Title XVI, to receive SSI benefits.
Entitled	To meet all the requirements for receiving Social Security benefits including the filing of an application and have the right to receive benefits.
FO	A Social Security Field Office
DHHS	Department of Health and Human Services
HI	Hospital Insurance (Part A)
HIB	Hospital Insurance Benefits
HUD	Housing and Urban Development (Department of)
IAR	Interim Assistance Reimbursement
IMPACC	Immediate Payment Critical Case
INA	Immigration and Naturalization Act
IRS	Internal Revenue Service

ICDB	Integrated Client Database
IEVS	Income and Eligibility Verification System
LAF	Ledger Account File (LAF Code is the Title II equivalent of Payment Status)
MAFDUP	Master File Duplication Detection Operation
MBA	Monthly Benefit Amount
MBR	Master Beneficiary Record (Title II)
MEF	Master Earnings File
MQGE	Medicare Qualified Government Employment
MSSICS	Modernized SSI Claims System
OEIE	Office of Electronic Information Exchange
OIO	Office of International Operations
OPM	Office of Personnel Management
OTP	One-time payment
Payment Status	The condition of a beneficiary's Social Security benefits, (i.e., suspended, current, or terminated).
PIA	Primary Insurance Amount
PIC	Payment Identification Code
POMS	Program Operations Manual System
Prouty	A special monthly payment may be made to certain people who have not worked long enough under Social Security to receive regular benefits. Men who were age 72 before 1972 and women who were age 72 before 1970 qualify for these benefits. However, the payment may be reduced by the amount of other government pensions received. Congress provided these payments in 1966 to provide some income for those people who had little or no opportunity to obtain Social Security coverage during their working years and for aged widows whose husbands had died without Social Security protection. The cost of the payments is met from general revenues.

APPENDIX B - TITLE II PAYMENT HISTORY TABLE

The last 8 *occurrences* of payment history data may be displayed to provide historical payment information. The pertinent data elements (positions 585-688 of the Type II record) are Monthly Benefit Credited (MBC) Date, MBC Amount, and MBC Type.

It is important to use all of the pertinent data elements in the matrix and provide definitions so that the entries will be properly interpreted. For example, some of the codes indicate that amounts were not due or that all or part of a monthly benefit was credited toward an overpayment recovery rather than issued to the individual. Also, it is essential to understand the meaning of *occurrence*. Each occurrence of data indicates a change in entitlement amount or reflects that benefits were not due. *Therefore, the 8 historical entries show the last 8 changes in benefit amount, not the last 8 months.* For example, an individual whose payment just changes once a year because of the cost-of-living adjustment would have only one occurrence of entitlement history per year.

In situations where the individual has been in current payment status, or in full suspense, AND there has been no retroactive change in his/her benefit amount, the history is also a payment history. However, in many cases where there have been adjustments to the record, this history does not accurately reflect the actual payments made. It does reflect what the individual was entitled to receive for those months.

The table on the following page shows an example of how to interpret Title II entitlement history entries and how to determine the entitlement amounts in specific months.

MBC Type: C	MBC Date: 04/97	MBC Amount: \$435.00
MBC Type: C	MBC Date: 03/97	MBC Amount: \$535.00
MBC Type: C	MBC Date: 01/97	MBC Amount: \$321.00
MBC Type: C	MBC Date: 12/96	MBC Amount: \$320.80
MBC Type: C	MBC Date: 08/96	MBC Amount: \$519.50
MBC Type: C	MBC Date: 12/95	MBC Amount: \$520.00
MBC Type: C	MBC Date: 12/94	MBC Amount: \$507.00
MBC Type: C	MBC Date: 12/93	MBC Amount: \$493.00

The preceding table indicates that the individual received the following payments:

<u>Benefit Amount</u>	<u>Payment Month(s)</u>
\$435.00	05/97 through date of query (8/1/97)
\$535.00	04/97
\$321.00	02/97 - 03/97
\$320.80	01/97
\$519.50	09/96 - 12/96
\$520.00	01/96 - 08/96
\$507.00	01/95 - 12/95
\$493.00	01/94 - 12/94

APPENDIX C - TITLE XVI PAYMENT HISTORY TABLE

The last 8 occurrences of payment history data may be displayed to provide historical payment information. The pertinent data elements (found in positions 1101-1292 of the Title XVI record) are PHIST Payment Date, SSI Monthly Assistance Amount, State Supplement Amount, PHIST Payment Flag 1, and PHIST Payment Flag 2.

It is important to use all pertinent data elements in the matrix and provide definitions so that entries will be properly interpreted. For example, some codes indicate that amounts were not paid or that all or part of a check was credited toward an overpayment recovery rather than issued to the individual. Also, it is essential to understand the meaning of *occurrence*. Each occurrence of data indicates a change in payment amount. *Therefore, the 8 historical entries show the last 8 changes in payment amount, not the last 8 months.* For example, an individual whose payment just changes once a year because of the cost-of-living adjustment would have only one *occurrence* of payment history per year.

The table on the following page shows an example of how to interpret Title XVI payment history entries and how to determine the payment amounts in specific months.

Payment Date	Monthly Amount	State Supplement Amount	Payment Flag 1	Payment Flag 2
08/01/1996	\$0.00	\$0.00	1	N
01/01/1996	\$470.00	\$0.00	1	N
08/01/1995	\$458.00	\$0.00	1	N
07/01/1995	\$38.31	\$0.00	5	N
07/01/1995	\$419.69	\$0.00	1	N
04/01/1995	\$45.80	\$0.00	5	N
04/01/1995	\$412.20	\$0.00	1	N
01/01/1995	\$434.70	\$0.00	1	N

The Title XVI Payment History Table indicates that the individual received the following payments:

<u>Payment Amount</u>	<u>Payment Month(s)</u>
\$0.00	08/96 No SSI payments have been made from 8/96 through date of query(8/1/97).
\$470.00	1/96 - 7/96
\$458.00	8/95 - 12/95
\$419.69	7/95 (\$38.31 was withheld for an overpayment recovery in 7/95 as indicated by code 5 in payment flag 1.)
\$412.20	4/95 - 6/95 (\$45.80 was withheld for an overpayment recovery from 4/95 - 6/95 as indicated by code 5 in payment flag 1.)
\$434.70	1/95 - 3/95

APPENDIX I - HISTORICAL REVISIONS REPOSITORY

This appendix contains sections that were included in previous versions of the SVES/SOLQ manuals. These sections are either obsolete or no longer pertinent enough to be contained in the main body of the manual but have been retained for historical purposes so that no information is lost.

Revisions to the April 2015 Manual to create the September 2015 Manual

1. Corrected the value for the Federal Living Arrangement Code description “Initial claims surface edit.” A value of “*” used to accompany the description, but SOLQ returns a “X” when this description applies (Rare).
2. Fixed margin and spacing issues throughout the charts of the Verification, Title 2, and Title 16 response record descriptions. These issues had caused much of the descriptions to be cut off.
3. Removed references to obsolete or disallowed codes in the Title 16 response.
4. Added a note to Appendix K that SVES state codes may have numbers 0-9 in the first position.
5. Corrected the statement in “7.INPUT: SVES INPUT RECORD LAYOUT” that Category of Assistance is also mandatory for SCHIP and PCIP, not just BENDEX/BEER and Food Stamp Death requests.

Revisions to the September 2014 Manual to create the April 2015 Manual

1. Removed references to Marital Status since it is unreliable and will no longer be populated on/retrieved from the SSR after 6/20/15. Pages 48, 73, 85, 121, 205
2. Added chart to Appendix G from SM 10802.125 listing Medicare Part B Premium Surcharge Group Payers.

Revisions to the April 2013 Manual to create the September 2014 Manual

1. Appendix I – Added prior revisions to the revision history. Added reference to Appendix I in Section 6.
2. TOC and Index – Updated page numbers.
3. Added explanation to Error Code 600: “SSN not verified, other reason.”

Revisions to the April 2011 to create the April 2013 Manual

Section 8.A.2. - Clarified Verification Code field definition, specifically 1, 3, 5 and * response codes.

Section 9B. – Disclaimer for COMMAREA layout.

Positions 71-75 are used in both the request and response

Section 9C – SOLQ Input/Request Area – Added Agency Identifier field.

Section 9E – SOLQ Error Codes & Messages – Added new codes.

Revisions to the June 2010 Manual to create the April 2011 Manual

Throughout Manual - Made revisions to consistently define Title II and Title XVI.

1. Purpose/Scope

- Removed SSA Data Exchange Branch from intended audience of manual

4. SVES/SOLQ Verification Process

- Removed description and specified this information is available upon request.

7A. Coding Specifications for the SVES Input Record

- Spelled-out SCHIP acronym. Changed HCR to PCIP which is the currently preferred designation for this program.
- Removed ‘HR (Home Relief Date)’ language from Date of Signed IAR Authorization field (99-106).

8A.2 SSN Verification/Standard Response Record Layout

- Input Category of Assistance - Changed HCR to PCIP which is the currently preferred designation for this program.
- Verification Code
 - Removed reference to Verification Process since it has been removed from the manual (see above).
 - Clarified V and X codes are not returned for SCHIP and PCIP requests.
 - Clarified A, B, C, and D codes are only returned for SCHIP and PCIP requests.

8C.2 S

- State and County Code of Reimbursement – Changed ‘agreement’ in definition to ‘authorization’.
- Medicaid Eligibility Code – Added F, Title VIII Recipient.

9A. SOLQ - General

- Minor grammatical corrections.

9C. SOLQ Input/Request Area in COMMAREA

- Specified mandatory fields.
- State Agency Code - Clarified that this field is comprised of a two-digit numeric State Code preceded by:
 - 0 – SOLQ request
 - W - PCIP Request
 - Z - SCHIP Request

9D. SOLQ Output/Response Area in COMMAREA

- Clarified exceptions in the SOLQ response layout.

9H. Resolving SOLQ Connectivity and Response Time Issues.

- Changed ‘SSA CICS Help Desk’ to ‘SSA CICS Monitoring Room’

APPENDIX F – Payment Status Code Values

- Removed references to SSA internal documentation.
- E02 redefined to remain consistent with SDX Manual.
- H70 – Redefined as ‘Hold pending one-time payment or other PE data to be transmitted’.
- M02 – Redefined as ‘Force due’.

APPENDIX K – SVES/SOLQ State Codes

- Added SCHIP and PCIP codes.
- Added Guam.

Revisions included in the June 2010 Manual

1. SVES Purpose/Scope – added States can obtain Citizenship Data to administer Health Care programs.

2A. SVES Overview

- Added language indicating that an additional non-native response includes Citizenship related data which is not provided in a separate file but as a subset of the Standard Type I Verification Response.
- revised BENDEX/BEER schedule frequency to indicate Monday through Friday.

2C. SVES OUTPUT

- Added to chart response information about Citizenship transactions

4. SVES/SOLQ – Verification Codes – Added Health Care Reform (HCR) Legislation to A, B, C and D response codes.

7A. Coding Specifications for SVES Input Record

- Added HCR to Notation (*) indicating that Positions 63 and 64 of the input record must both be blank or the response will return an error with an Error Condition Code of 500.
- Added Category of Assistance Code (Position 68) of W – HCR Request

8A.2 SSN Verification/Standard Response Record Layout – Unabridged

- Added W-HCR and Z-SCHIP code descriptions to Category of Assistance Code
- Added Health Care Reform (HCR) Legislation to A, B, C and D response codes.

Revisions included in the July 2009 Manual

1. Added verbiage regarding new request and verification codes for State Children’s Health Insurance Program (SCHIP)* data requests via SVES. Changes can be located easily by checking the page numbers listed for “SCHIP” in the Index of this manual.

Note: SCHIP request processing will begin on January 01, 2010. SCHIP requests cannot be made via SOLQ.

- Section 4 – SVES/SOLQ Verification Process
- Section 7 – SVES Input Record Layout
- Section 8A.2 – SSN Verification/Standard Response Record Layout - Unabridged

*Also referred to as CHIP (Children's Health Insurance Program) and CHIPRA (Children's Health Insurance Program Reauthorization Act of 2009)

2. Corrected verbiage describing the ‘F’ Verification Code to state that the first letter of the First Name (rather than the first 3) is used for matching/verification.
 - Section 4 – SVES/SOLQ Verification Process
3. Added verbiage to state that the ‘&’ Verification Code is not returned for SOLQ requests.
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record – Unabridged
4. Added verbiage to state that the ‘*’ Verification Code is considered a verified code along with the alpha verification codes.
 - Section 4 – SVES/SOLQ Verification Process
5. Added verbiage to state that the Date of Death is not returned in the Verification SSN data area for SOLQ transactions when the Verification Code returned is ‘X’.
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged

6. Added verbiage to state that the Title II Status and Title XVI Status values are not returned for Prisoner data requests.
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged
7. Added Appeal Code ‘F’ verbiage.
 - Section 8C.2 – Title XVI Response Records Layout – Unabridged
 - Section 8D.2 – Title II and Title XVI Response Records Layout – Unabridged
8. Corrected Direct Deposit Indicator code values.
 - Section 8C.2 – Title XVI Response Records Layout – Unabridged
 - Section 8D.2 – Title II and Title XVI Response Records Layout – Unabridged
9. Added verbiage that, prior to embarking upon a SOLQ implementation project, that the latest version of the SOLQ Planning Guide should be acquired from the Regional Data Exchange Coordinator.
 - Section 9 – State Online Query (SOLQ)
10. Removed the E888 Error Code from the SOLQ Error Codes and Messages as it is no longer valid.
 - Section 9 – State Online Query (SOLQ)
11. Added verbiage, for resolving SOLQ connectivity problem instructions, that the CICS production region to which a State could be connected could be CIPSOA1, CIPSOA2, or CIPSOA3 due to “load leveling” optimization.
 - Section 9 – State Online Query (SOLQ)
12. Changed, throughout the document, OSSOM (Office of Systems Security Operations Management) to OEIE (Office of Electronic Information Exchange) to reflect component reorganization.
13. Moved previous revisions to the manual (February 2007) that were in this section (6) to Appendix I – Historical Revisions Repository.
 - Section 6 – Revisions to the Manual
 - Appendix I – Historical Revisions Repository
14. Various, numerous, minor typographical errors were corrected throughout the document.

REVISIONS INCLUDED IN THE FEBRUARY 2007 MANUAL

1. Changed verbiage in the Timing of Response and Reference Columns for BENDEX and BEER to reflect, respectively: a) BENDEX and BEER are now daily processes and not monthly and b) references are no longer found on POMS but as links on PolicyNet.

- Section 2C – SVES OUTPUT – GENERAL
2. Added verbiage to the explanation of SVES/SOLQ Verification Code ‘X’ to state that Date of Death will be provided in the Verified SSN data field for those records where source of Death data is any source other than a State that restricts redisclosure of the State reported Date of Death.
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged
 3. Added verbiage to the explanation of SVES/SOLQ Verification Code ‘F’ to state that Surname provided does not match database for that SSN, but month/year of Date of Birth, first 3 letters of First Name and the Middle Initial Match. This picks up cases where person has changed their surname (e.g. marriages, adoptions).
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record – Unabridged
 4. Added verbiage to the explanation of SVES/SOLQ Verification Code ‘*’ to state that the SSN verified was located by substituting every number in the input SSN with every other number in the input SSN, and that this resolves transcription errors.
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged
 5. Added verbiage to the explanation of SVES/SOLQ Verification Code ‘&’ to state that this is an SVES-only code.
 - Section 4 – SVES/SOLQ Verification Process
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged
 6. Moved previous revisions to the manual (March 2005) that were in this section (6) to Appendix I – Historical Revisions Repository.
 - Section 6 – Revisions to the Manual
 - Appendix I – Historical Revisions Repository
 7. Added verbiage to explain that if the CAN/BIC field is used in the SVES/SOLQ Input Record, then the Input SSN field must contain spaces and not zeros; zeros will cause a reject in the SSN Verification/Standard Response Record.
 - Section 8A.2 – SSN Verification/Standard Response Record - Unabridged
 8. Added verbiage to the Definition of the MBC Type field to establish that “Benefits Paid” equates to “Credited”, and “Benefits Not Paid” equates to “Not Credited”.
 - Section 8B.2 – Title II Response Record Layout – Unabridged
 - Section 8.D2 – Title II and Title XVI Response Record Layout - Unabridged

9. Added new values for the Appeal Code field to include D-Decision Review Board Review and I-Initial Determination Review.
 - Section 8C.2 – Title XVI Response Record Layout – Unabridged
 - Section 8D.2 – Title II and Title XVI Response Record Layout – Unabridged
10. Added language to the Keys to SOLQ Connectivity to reflect the use of Enterprise Extender in place of Front-end processors
 - Section 9 – State On-line Query
11. Removed language for SOLQ Validation and Integration testing stating that State’s test results should be e-mailed or faxed to SSA Project Lead. These steps are obsolete and are not done any longer.
 - Section 9 – State On-Line Query
12. Fixed list of State Codes to reflect that MN is Minnesota and not Michigan.
 - Appendix K – SVES/SOLQ State Codes

Various, numerous, minor typographical errors were corrected throughout the document.

REVISIONS INCLUDED IN THE MARCH 2005 VERSION

Many of the revisions included in this manual were implemented as a direct result of suggestions polled from both the SSA Regional Data Exchange Coordinators and the States’ user community. All suggestions that were submitted were evaluated. Many, but not all, of the suggestions were incorporated. Those suggestions that were not included in the revision were usually deemed “out of scope” for the purposes of this manual. Thank you to all of those who participated and offered suggestions.

The following items are some of the major changes and upgrades that have been made, and that differ from the previous (July 2002) version of the manual:

1. This version now contains an index to facilitate and expedite the search for information within the manual.
2. The output response record layout sections and their associated field definitions sections have been consolidated. The reader no longer has to “flip” to another section to access the definitions and valid values of fields within a record when looking at a record layout; the definitions/values are embedded within the record layout. Each consolidated (or unabridged) record layout is also preceded by an abridged, “quick-reference” record layout that does not include the field descriptions/values but only the field name and position within the record. With the new features, the revised manual now provides the reader with two methods of quickly locating a field’s definition and valid values: a) using the new index to look up the definition in the record layout via the field name and, b) using the abridged record layout (immediately preceding the unabridged layout) to determine the relative byte address

- (position) of a field and using that address to look up the description in the unabridged record layout.
3. Every attempt has been made to verify the correctness and completeness of all code values for every field which supplies a code as its output value.
 4. The Glossary and Acronyms appendix has been enhanced to include more entries.
 5. Section names have been added to all page footers to aid the reader when “flipping through” the manual to look for a particular section.
 6. In the electronic version of this manual, many “links” have been added when references are made to other sections (e.g. Appendices). This will allow you to “click and go” to the referenced section. These links can be recognized when the text is underlined and are in the color blue as follows: [LINK EXAMPLE](#). In Word, you can press CNTL and click on the link to go immediately to that section. Additionally, the Table of Contents items are also links and can be used in the same manner.
 7. Many existing sections (including the SOLQ section) in the manual have been expanded and enhanced to provide more information and, in some cases, flowcharts/diagrams are included to facilitate comprehension and summarize processes.
 8. The addition of documentation for the VA EARN response. The VA EARN response is a specialized response that has been provided via SVES for a few years to four select Federal Agencies (Veteran’s Administration, Office of Personnel Management, Railroad Retirement Board, and the Department of Housing and Urban Development). *This query is not available to States or other agencies.* The inclusion of VA EARN in this revised manual is only for purposes of completeness; to document *all* functions of SVES within this manual. VA EARN data is restricted to the four agencies mentioned previously. Any questions or inquiries regarding obtaining this specialized response should be directed to the SSA Office of Income Security Programs/Office of Earnings and Information Exchange (OISP/OEIE).
 9. An appendix has been added for SSA personnel that provides the sources for SVES fields. That is, field names from the MBR and SSR data dictionaries are cross-referenced to the SVES field names to indicate from where the SVES field data is extracted.
 10. Corrections have been made to various areas erroneous information was provided (e.g., payment history table examples)
 11. Some sections of the previous version of the manual that were determined to be “out-of-date” or “additional information” (e.g., previous revisions to the manual) have not

been removed but have been consolidated and moved to a Historical Repository appendix.

12. Though requested by some, sample SVES and SOLQ model agreements *have not* been added as appendices to the manual. This decision was made on a variety of factors, one being the amount of volume (bulk) that it would add to this manual. States can obtain model agreements from their SSA Regional Data Exchange Coordinators. SSA Regional Data Exchange Coordinators can obtain the model agreements from the Office of Income Security Programs/Office of Earnings and Information Exchange/Information Exchange and Computer Matching (OISP/OEIE/IECM).

The following items are some of the changes and upgrades that have been made to the March 2005 version since its initial release:

- (03/08/2006) The description for SSN Verification Code '5' is changed to "Surname or Given Name does not match" from "Name does not match".

REVISIONS INCLUDED IN THE JULY 2002 VERSION

EFFECT OF SVES ON BENDEX/BEER/SDX PROCESSING

Use of SVES to input transactions to BENDEX/BEER/SDX will result in the normal output from those exchanges to the State (twice a month for BENDEX/BEER and 4 to 5 times per week for SDX). There are no changes in the format or frequency of BENDEX/BEER/SDX files. The change that will affect these outputs is that through the standard SSN verification portion of SVES, any transaction for a verified SSN will be accepted by the various SVES exchanges (BENDEX, BEER, SDX, 40 Qualifying Quarters) without the need for further matching. The result of this verification/acceptance reduces the number of unmatched/rejected transactions and subsequently, provides more accurate and timely data. For example, when SVES is used instead of BENDATA transactions to process BENDEX actions, the SVES match criteria replace the BENDEX match criteria (refer to POMS SM 10801.260 and SM 10801.265, accessible by SSA staff only).

MCMAHON VS. CHATER COURT ORDER

The civil action in the McMahon vs. Chater court order requires the modification to SVES to provide additional data to the States for the identification of dually entitled claimants. The new data elements are listed below. They are included in the SVES Title II response.

- Other Date of Entitlement
- Other Primary Insurance Amount
- Other Retirement Insurance Amount
- Larger Full Monthly Benefit Amount

- Larger Excess Monthly Benefit Amount
- Smaller Full Monthly Benefit Amount
- Smaller Actuarially Reduced Monthly Benefit Amount
- Dual Entitlement Status Code
- Other Office Code
- Type of Dual Entitlement
- Other Primary Insurance Amount Factor Code
- Other Primary Insurance Amount Factor Code Two
- Other Eligibility Year

YEAR 2000

Year 2000 changes required that dates be expanded to reflect the "century" along with the month, day and year. This expands date fields from six positions to eight positions (MMDDCCYY), or from four positions to six positions (MMCCYY).

WELFARE REFORM LEGISLATION (40 QUALIFYING QUARTERS)

Briefly, from a single modified SVES query, SSA will provide a Title XVI response which will provide both SSN verification and Title XVI (SSI) payment history. A *second* response, as a result of the same SVES query, will be provided by the Earnings system, and will provide quarters of coverage data. Both responses will be returned to the requesting States as separate files overnight. The new data elements for 40 Qualifying Quarters are listed below. They are included in the 40 Qualifying Quarters (40 QQs) response.

- Condition Code
- Minimum Number QQs 1937-1950
- Maximum Number QQs 1937-1950
- Qualifying Quarters Pattern
- Railroad Service Months

PRISONER RECORD DATA

Effective November 1998, in accordance with a Presidential directive, SSA must make available Prisoner status to States, the Food and Nutrition Service (Department of Agriculture), the Department of Education, and other Federal-benefit paying entities. To accomplish this, the SVES system accepts requests for Prisoner information and makes available a query response, delineating the Prisoner information as it appears on our Prisoner databases.

The new Prisoner query will be requested via SVES by an entry of "P" in both positions 63 and 64 on the SVES input record. This input, following our standard SSN verification procedures, will produce an SVES response record containing SSN

verification data. It will also create a finder file to the Prisoner system that will generate a response file containing Prisoner data. Responses from the Prisoner system will provide the following:

- Name
- SSN
- State Code
- Welfare ID number (input by the requester)
- Status Code
- Prisoner Data

Output files will be fixed block, 494 length records.

FOOD STAMP DEATH DATA

Effective September 2000, in accordance with legislation, SVES will provide death data from the NUMIDENT database. Only those queries with Food Stamp involvement (as identified by the Category of Assistance) will receive the death information. The data will consist of a Verification Code of 'x' and the date of death displayed in Verified SSN Data. Death data will be returned if:

- Death report was not received solely from a State that restricts redisclosure of the data.

STATE CODE CHANGE

Effective September 28, 2001, the SVES system will receive and reply to SVES queries on an individual State-agency basis.

SVES system utilizes a 3-position State code within the SVES input record (position 65-68) to designate the requesting State (or Federal agency). Since we use the Title XVI standard all State codes previously began with '0' (numeric zero). With the enhancement we will utilize the first position (High Order Position –HOP) of the State code to designate agencies within a State as well as to limit the data that an agency is permitted to receive. The new State codes will range from '0--' through '9--'. By utilizing the HOP, we will have the ability to respond directly to the requesting agency without the necessity of providing all responses to a single agency (usually the 'A' agency) and expecting that agency to sort the responses, sanitize, and provide individual sub-files to other agencies.

State agencies must contact the Regional Office for information on having a HOP assigned to them. It will also be necessary for the 'new' user entity to provide a dataset name for both the input file to SSA and the response file from SSA to enable Systems to create the State-agency sub-files. These dataset names will be incorporated in new Cyber Fusion processes.

APPENDIX J – SVES/SOLQ FIELD SOURCES

VERIFICATION DATA ELEMENTS

VERIFICATION SVES DATA ELEMENTS	SOURCE OF DATA
Input SSN	The SSN provided on the input from the original verification request.
Input Claim Account Number (CAN) (10-18)/BIC (19-21)	The CAN/BIC provided on the input from the original verification request.
Input Surname	The Surname provided on the input from the original verification request.
Input Middle Initial	The Middle Initial provided on the input from the original verification request.
Input Given Name	The Given Name provided on the input from the original verification request.
Input Date of Birth	The Date of Birth provided on the input from the original verification request.
Input Sex	The Sex Code provided on the input from the original verification request.
Input State Agency Code	The State Agency Code provided on the input from the original verification request.
Input Category of Assistance Code	The Category of Assistance Code provided on the input from the original verification request.
Input State Communication Code	The Communication Code provided on the input from the original verification request.
Input Welfare ID Number	The Welfare ID Number provided on the input from the original verification request.
Date of WTPY Response	System generated date from SSA.
Error Condition Code	SVES generated code.
Identity Discrepancy Code	SVES generated Code
Blank	Not used.

VERIFICATION SVES DATA ELEMENTS	SOURCE OF DATA
Verification Code	SVES generated code.
Verification SSN Data	Depending on the data in this field (which relates to the Verification Code field) this could contain either a SSN, date of birth, or date of death from the NUMIDENT database or multiple SSNs from the MULTEX database.
Record Type	SVES generated code to indicate the type of response. Correlates to the Title II & 16 Request Types input from the original verification request.
Title II Status	SVES generated code.
Title XVI Status	SVES generated code.
